INTRODUCING

DONUT & PASTRY FILLER

Total Portion Control - Thanks to the Dawn Donut and Pastry Filler built-in computer, up to ten of your most popular fillings are stored in memory.

The operator simply snaps on the filler unit (with its own self-contained pump and spouts) and chooses a filling with the touch of a button on the power base. This control pad indicates the selected filling by name (apple, cream, lemon, jelly, etc.) and the computer does the rest. It automatically delivers predetermined, volume-controlled portions, resulting in the greatest cost-efficiency available today.

True Memory - Portion amounts are retained even when the machine is turned off. A large LED display makes it easy to change the filling consistency, preventing over or under dispensing. More permanent setting changes are just as easily programmed.

Solid Construction - The only Donut and Pastry Filler with a cast aluminum power base, heavy duty motor, positive displacement pump, direct output and a 2-year manufacturer's warranty.

With over 1000,000 units in daily use, the Dawn Donut and Pastry Filler is simply the most popular and reliable machine available today!

Increased profits - With pre-programmed position control, even your most inexperienced employee can be trained in minutes to fill uniformly and quickly. The insta-change filler unit makes switching fillings a simple procedure as well.

Optional Foot Pedal Control Available

**Optimal Jelly Hopper Available
UNI-JH102**

**Pre-programmed Portion Amounts
For Up To 10 different Fillings
with the Donut & Pastry Filler**

UNI-DFT-27
